

the planet needs you
to give a shit

WHY DOES ECO-SHOUT EXIST?

- because over 80% of Australia's species are found no where else on earth - and Australia has the highest rate of extinction in the world
- because Australia is home to the world's largest intact temperate rainforest - and we continue to clearfell log it and other old growth and rainforests
- because in most states, only 10% of Australia's natural habitat remains - and we continue to clear this land at a rate higher than all but three other countries
- because Australia has the highest Greenhouse Gas emissions per capita in the world
- because there are alternatives
because the future of our environment depends on us

the planet needs you
